- EPDM R bber (or eth lene prop lene diene monomer) is s nthetic rubber ith high densit. It is an ideal outdoor material and e hibits properties found in both natural rubber and s nthetic rubber. EPDM materials are less cost ith higher tensile strength and abrasion resistance than silicone materials. The EMDM and the number is here on a BM sulfue for pero ide. In some instances, sulfur cured gaskets can discolor silicone sealants; therefore, pero ide-cure ma be preferred. The onl available color for EPDM is black.
- Neoprene R bber (barRblebThlompprene) is a versatile s nthetic rubber ith e ceptional resistance to oil, petroleum, and eathering, but it is t picall not preferred as it is an older technolog. Neoprene pol mers must be enhanced to offer good UV, o one and chemical stabilit, ith fle ibilit over a ide temperature range, and superior abrasion anpvan
